

**[1]What is the purpose of this application?**

The purpose of this app is to provide relevant information to both UPS visitors and students in a streamlined and efficient manner.

**[2]What does the application actually allow you to do?**

The user can:

- Access a map of campus and the surrounding area
- Find detailed information that is otherwise inaccessible or rare (i.e. building history, a directions map specific to campus)
- Find restaurants and activities in the nearby community worth mentioning (perhaps categorized by: food, activities, music, religious, etc.)

**[3]With a list of what the application actually does, break components down into a concrete outline of how the user will get to point A to point B or point A to point C, where these points = a list of what the application actually does.**

From the load screen / splash image, the app will open onto an overview map of the UPS campus. This is the map that can be zoomed in on and specific landmarks selected for more information, and locations and directions can be searched Google Maps-esque. The top-left will have a button to open a menu containing the links to other pages within the app. This top-left button would remain on each page and function as the core means of navigation in-app.

**[4]Number 3 was a loaded question so what does the user see when he/she opens the app?**

The first thing the user sees is a bird's-eye view map of the UPS campus.

**[5]Follow up for #4, what are they able to do on that first screen?**

The map can be zoomed in on (an assumption of note here is that the map will be at or near full outward zoom) and tapped on in various locations to bring up information about that specific place, i.e. Todd Field, A/L, the SUB, etc. Potentially, this can also be the page that enables searching for locations and directions.

**[6]Do we want to work with landscape or portrait orientation? or maybe both?**

I find portrait or both to be the preferred option.

**[7]What do you want to see in this app?**

I want to see information presented in a way that avoids the hassle of school websites and demonstrably assists users in daily functions on campus.

**[8]what are the pages we want in this app?**

- maps page: contains a map of campus and the surrounding area
  - Respective basic info pages for each relevant location/landmark and possibly interior pictures of buildings
- News page with recent events
- Upcoming events calendar

*Possible, but not as critical*

- Daily SUB menu?
- Way to keep track of major progress (would likely require a login system, and therefore less ideal)
- List of active tutors in various locations and their hours

**[9]what exactly are we trying to do?**

The goal as I see it is to open the UPS campus to visitors while simultaneously making information about the

local community more accessible to students, hopefully creating a more integrated environment in terms of school-and-town interaction. Furthermore, providing potential new students with greater information than is already available (such as pictures of dorms and dorm rooms, for example) may encourage a higher enrollment rate and improve the prospects of UPS in the future.

**[10]what is the tour guide's app vision/mission statement?**

While this is something that needs to be discussed with the entire team, I believe the previous answer sums up my thoughts on the mission statement.

**[11]add your own questions for us to answer and comments too for this app.**

- How will this app be supported in the long term?
